

## BENEFICENT RAIN

Nearly two inches of rain fell during the past week. During the first storm .5 of an inch fell and .8 in the second down pour. The balance was made up during the subsequent show, which seems to have been general over a large area.

It has placed the ground in ideal condition for fall plowing and has insured a good fall stand of winter wheat on the dry farms.

It has made the sugar beets more crisp and freshened up the ranges for the sheep men. The tops of the mountains both east and west were covered with a foot of snow.

## NO PRIESTHOOD AND UNION MEETING THIS MONTH

On account of General Conference there will be no monthly priesthood and union meeting held in the Alpine Stake on Sunday, Oct. 8. Postponed for one month.

## DRIVING CEDAR VALLEY WELL

William Thomas of Fairfield has been working for the past two weeks on the state experiment well in the north end of Cedar Valley. The heavy gravel makes the work most difficult and he is only down 50 of the 600 feet called for in the contract.

## SALT LAKE ROUTE TAKES OFF TRAINS.

Commencing tomorrow, Oct. 8, the Salt Lake Route will discontinue running trains Nos. 61 and 62 on Sundays. They, however, will run as usual on the other six days of the week. 7-11

## UTAH LAKE FISH ARE BEING CANNED AT SPRINGVILLE

The Mountain Lake Fish Canning company, organized to can the common fish of Utah lake and other Utah lakes and streams, is operating an experimental plant at Springville, in charge of J. F. Green, secretary of the company. The product that has so far been turned out has been tested by a number of people and invariably pronounced superior to imported canned fish. In the process of cooking the small bones, which are so objectionable, disappear entirely. The company intends to go into the business on a large scale.

## DELINQUENT NOTICE

The Comstock Mining and Milling Company, principal place of business, American Fork, Utah.

NOTICE—There are delinquent upon the following described stock on account of assessment No. 1, levied on the 16th day of August, A. D. 1916, the several amounts set opposite the respective share holders as follows:

Name	No. cert.	shares	amt.
Jacob Greenwood	3	35,714	\$17.85
H. D. Wilde	7	35,714	17.85
Marion Gardner	9	35,714	17.85
Wm. Dorton	11	35,714	17.85
J. R. Austin	12	35,714	17.85
W. D. Jones	13	35,714	17.85

And in accordance with law and an order of the board of directors made on the 16th day of August, 1916, so many shares of each parcel of stock as may be necessary will be sold at the residence of the secretary on Tuesday, the 10th day of October, 1916, at the hour of 4 o'clock p. m. to pay the delinquent assessment, together with the cost of advertising and expense of sale.

F. M. HOUSTON Secretary.  
First pub. Sept. 30—last Oct. 7, 1916

## DOES THIS MEAN YOU?

Within the next 60 days we ask all our subscribers to send us a check or call in and settle up for their subscription for THE BANNER, THE CITIZEN and REVIEW. The amount is very small for each person, but it amounts to a large sum totaled together.

For the benefit of those who are owing more than one year and take no notice of our statements we will turn their account over to the Publishers' Adjusting Association. We hope there will be few who will consent to take this course.

## LIFE'S LEVITIES

## GOOD IN HEALTH EDUCATION

Organized Fight Against Tuberculosis Has Been Productive of Some Wonderful Results.

All within a decade or so has sprung up the present organized fight against the white plague. The field that, ten years ago, was almost barren of any organized machinery for the control of the disease, includes at present 1290 local antituberculosis organizations, 579 hospitals and sanitariums, 540 special dispensaries, 1000 dispensary physicians, 1000 nurses, and 400 open-air schools. The total cost of creating and operating this machinery represents an outlay of over \$100,000,000 of public and private funds.

But there are results to show from all this expenditure. They may be summarized as follows: (1) The steadily growing enlightenment of the people on the subject of tuberculosis, its causes, methods of prevention and treatment; (2) the gradually falling mortality from the disease (in the registration area in 1902 the rate was 16.3 per 10,000; in 1911, 13.2); and (3) the impetus given to the entire public health movement through concentration of public attention on a disease, the gradual eradication of which is dependent on the realization of higher general health standards.

The present lower mortality marks the effect of the intensive educational campaign, of the steadily expanding system of institutional and home control of the disease, and of the general improvement in the sanitary and economic conditions of the people. Tuberculosis, however, is still with us, with its appalling though reduced mortality, and with some of its fundamental problems still awaiting solution.

## Vegetables of Medicinal Value.

Most of our common garden vegetables are reputed to have some medicinal value. Among them so reputed are asparagus, beans, beets, carrots, celery, cucumbers, lettuce, tomato, rhubarb. Each of these has a different influence from the others, but combined they make for health. The family having a garden will certainly consume a far greater variety of food than one that has to buy everything. In some prisons where the prisoners are given a very limited range of food the physicians report the principal sicknesses to be intestinal disorders. Every family should have as big a vegetable garden as it can find space for.

## A Deserted Village.

The first time you see a destroyed and deserted village you have strange feelings, especially when you know that the smashing process may be resumed at any minute. Can you imagine a village which has no inhabitants—houses with only parts of walls standing, perambulators, chairs, bedsteads and pictures heaped up in confusion, churches destroyed as if stepped on by a giant, tombs a tumbled-up heap in the church yards, no children at play, no shops, no sounds except the echo of your footsteps and the roar of distant guns?—Capt. Louis Keene, in Cartoons Magazine.

## "NEW TOLSTOY" IN RUSSIA

Literateurs Have Become Excited Over the Work of Ivan Alexievitch Bunin.

The May issue of the Russkaya Mysl (Moscow), a leading Russian monthly, contains a remarkable review of a story that had been published in Russia some months ago, according to the American Review of Reviews. The author of the story is Ivan Alexievitch Bunin, a widely known Russian poet, and its title is "The Gentleman From San Francisco."

It is perhaps no exaggeration to say that no other story that has appeared in Russia in recent years has been accorded such a warm welcome as "The Gentleman From San Francisco." And this is the more remarkable when one considers that Bunin is by no means a young or unknown figure on the Russian literary field. His reputation as a poet of high quality was made long ago. He is now in his late forties. In 1912 the honorary degree of academician was conferred upon him, and during the last twenty-five years Russian critics have had opportunity to study Bunin's literary powers and to learn their potentialities and limits. This, however, did not prevent him from taking the literary world by storm with his latest production.

The Bulletin of Literature and Life, a monthly of high literary standard, was the first to break to the Russian world in a recent issue the news that Bunin's new story is nothing like any of his former works. As soon as attention was attracted to it, the periodical press began to write about it, commending "The Gentleman From San Francisco" in glowing and enthusiastic terms. It became clear to the Russian public that Bunin was just entering his golden era, that the creative genius of the poet had just found itself and that the numerous literary productions of Bunin constituted but the ladder of gradual self-perfection that led him to the apogee of his career. And it is in this spirit that A. Derman, a noted critic, writing in the Russkaya Mysl, hails Bunin as a new Tolstoy.

## FARMER AS MODERN ATLAS

Summer Fields Show an Astonishing Small Number of Tillers Doing Necessary Work.

Midsummer fields on separate farms hold the material which later is to feed and clothe all the people. One sees farmers cultivating long rows of corn, sees them putting countless bundles of grain in shock, sees them drawing interminable loads of hay from the swath or windrow to barn and stack; and when one looks at this very particular and painstaking labor in its separate units there is amazement in noting how few men and teams are engaged in accomplishing the huge work, observes a writer in the Breeder's Gazette. They are so few that in a ten-mile stretch of farms, viewed from the car window or the highway, they will count up an astonishingly small total.

These men and teams work early and late, under stress of weather and the drive of simultaneous ripening. These men and teams look lonely in their wide apartness, and yet they are actually accomplishing stupendous things for the comfort, for the gratification, for the very existence of the human family. They produce the food that "strengthens the arms that work the purposes of the world." They grow the cotton and wool which, after giving employment in its manufacture to incredible numbers, clothes becomingly and in comfort school children, busy men and women and all the idle ones.

They are so few in the fields in the hot days, and so large is their burden of responsibility that the story of Atlas bearing the world on his shoulders appears not a myth but a true picture of the farmer with his burden—the farmer carrying the food and clothing of the world.

## Hebby of the Germans.

It is a well-established fact that the Germans as a people are the greatest stamp collectors in the world, and hundreds of Teutonic experts constantly are on the lookout for unusual ink stamps, offsets, defects in plates and other rarities in stamps which appeal particularly to philatelists. In Belgium there were certain varieties of native stamps of considerable value kept in the post offices, and one of the first things the German forces did when they invaded that country was to sack the post offices and take all of the stamps. No doubt these long stamps and their way to the German depositories.

## Helping the Women

We feel that in a very real and effective sense our electric service offers its aid to lift the burden of household tasks in this community.

Whether the mistress of the house does her own work or hires it done, whether in the humble home or in the stately residence, there is much day-in-and-day-out drudgery about housework and it usually falls to the lot of women to do this work.

The old saying, however, that "a woman's work is never done," is rapidly giving way to a realization by women that it is possible now to eliminate from their house work the greater part of the hard work and irksome operations, by using electric service.

Take wash day, for instance. The electric washer and wringer and the electric flat iron have robbed it of its terrors. The washer and wringer does away with almost all the hard muscular labor, while the electric flat iron saves time and strength. The electric irons are convenient, also, to use in odd times and places, as in the pressing operations of home dress-making, saving the necessity of going to kitchen or laundry for a hot iron.

We are proud of the fact that every seventh residence customer connected to our lines uses an electrically operated washing machine.

Practically three-fourths of all our customers are using electric irons.

Ninety-six per cent of all the residences within 300 feet of our distribution lines throughout the entire territory served are using electric service.

The electric vacuum cleaner is another real burden-lifter. How easy to operate; how clean, refreshing and sanitary the result. Still another strength-saver is the sewing machine motor, enabling the operator to give her whole attention to the sewing itself.

Consider also the great comfort and convenience of the various heating and cooking utensils, such as the electric toaster for the breakfast table or the invalid's chamber; the electric percolator, the electric chafing dish, the grill, egg boiler, cereal cooker, tea kettle, oven, stove, and the like—a long list of cleanly, inviting appliances. Nor should one forget the electric curling iron heaters, hair dryers, vibrators and other toilet accessories.

The electric range is rapidly coming into its own and nearly 1500 electric cook stoves are now in use in the homes throughout the territory we serve—homes where hot, stifling kitchens have been banished forever, and where women are cooking more easily and comfortably than ever before in their lives.

We should like to have more of the women of this community bring us their household problems to help solve electrically.

And in accordance with law and an

order of the board of directors made on the 20th day of August, 1916, so many shares of each parcel of stock as may be necessary will be sold at the office of the secretary, at Sanitary Meat Market, on Tuesday, the 10th day of October, 1916, at the hour of 4 o'clock p. m. to pay the delinquent assessment, together with the cost of advertising and expense of sale.

L. S. HARRINGTON, Secretary.  
First pub. Sept. 30—last Oct. 7, 1916.

## NOTICE TO WATER USERS

State Engineer's Office,  
Salt Lake City, Utah, Sept. 21, 1916.

Notice is hereby given that James Peterson, whose post office address is Lehi, Utah, has made application in accordance with the requirements of the Compiled Laws of Utah, 1907, as amended by the Session Laws of Utah, 1909, 1911 and 1915, to appropriate two (2) cubic feet of water per second from springs and seepage in Utah County, Utah. Said water issues at a point which bears north 59 degrees 5 minutes west 389.3 ft. from the northeast corner of Section 10, Township 5 south, Range 1 east, Salt Lake base and meridian, at which point the water will be diverted and conveyed by means of a ditch for a distance of 8,000 feet and there used from April 1 to October 31, inclusive, of each year, to irrigate 160 acres of land embraced in the southeast quarter of Section 9, and the south half of Section 10, township and range afore-said. This application is designated in the State Engineer's office as No. 6874.

All protests against the granting of said application, stating the reasons therefor, must be made by affidavit in duplicate, accompanied by a fee of \$2.50, and filed in this office within thirty (30) days after the completion of the publication of this notice.

W. D. BEERS,

State Engineer.  
Date of first publication Sept. 28, 1916.  
Date of completion of publication Oct. 28, 1916.
